Gigabit Broadband Infrastructure for Legacy Multi-Tenant Environments with Aditum-Technity Solutions Partnership

December 14, 2020

Aditum, known for its broadband infrastructure delivery platform giving building owners control over their telecom network in multi-tenant properties announces a strategic partnership with Technity Solutions, a multinational company headquartered in Ontario, that supplies managed service providers, municipalities, corporate and government networks with equipment options to build smart networks of tomorrow for existing buildings.

"The collaboration improves the tenant connectivity experience while assisting solution partners to deliver gigabit speeds to existing Multi-Dwelling and Multi-Tenant properties," said Brian Higgins, CEO, Aditum. "Providers now have the best-in-class, complete, broadband connectivity solution for multitenant environments that will reduce OpEx and tenant turnover; while aiding to generate ROI through revenue opportunities associated with Internet service."

The key to the collaboration "lies in the ability of CRE owners/operators to unify their legacy building systems, creating a single platform to manage and control the growing number of internet connected technologies, while adding an important tenant amenity: robust, high-speed Internet connectivity," explained Jeff Mulqueen, VP of Business Development, Technity. "By partnering with Technity we've opened the market to deploy in more legacy buildings using existing wiring to accelerate installation, scale and provide an integrated view of connectivity from a single cloud-based management system," concluded Higgins.

The GigiWire solution brings 2-wire copper and coaxial access into the gigabit era by delivering fiber-like

Aditum and Technity deployments offer owners/operators alternative tools to unify tenant broadband in legacy mulit-tenant environments. Technity's Gigiwire and Aditum IMS solution creates a single platform to manage/control the growing number of Internet connected technologies AND provide an amenity tenants demand: Internet.

speeds. By introducing GigiWire at Fiber-to-the-Building sites, operators can reuse the existing infrastructures to deliver gigabit access without rewiring. Combining this infrastructure with Aditum, enables rapid deployment of world-class ISP infrastructure in existing buildings lacking wiring infrastructure or the ability to add it.
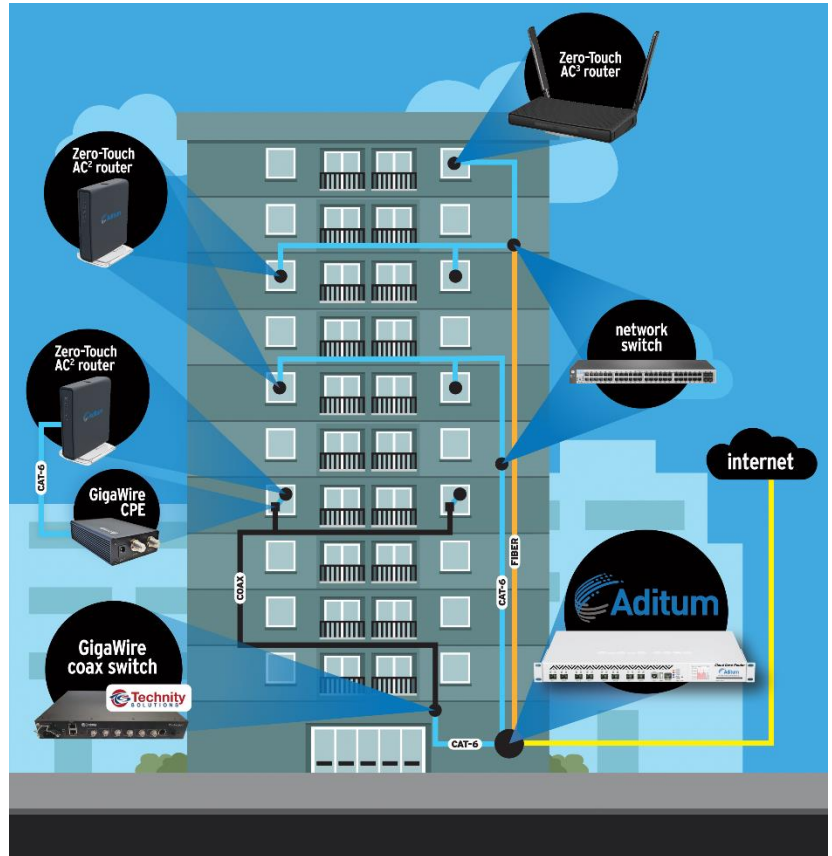

About Aditum

Aditum, is a technology leader that develops and supplies broadband infrastructure solutions for multitenant properties. Providing access, Aditum's cloud-based platform revolutionizes connectivity by delivering an affordable, high-speed Internet connectivity experience to tenants of residential and commercial properties. Linking building owners who understand the importance of creating the best-possible Internet experience for their tenants with a growing network of local dealers and installers, Aditum's turn-key proven technology and methodology have resulted in implementations across North America. www.aditumims.com.

About Technity Solutions

Technity Solutions assists service providers to accelerate innovation in connecting their customers to the world.

Technity brings to market products that innovate and optimize communication networks. We also provide installation materials for: access, wireless, optical, corporate and private networks; physical plant and MDU solutions. www.technitysolutions.com.
